TOOLBUS Interface for COOL:Biz and Select Component Architect (Select Enterprise) Version 3

Data Sheet

(effective March 2003)

The TOOLBUS Interface for COOL:Biz and Select Component Architect (Select Enterprise) enables the migration of these models from COOL:Biz to Select Enterprise:

- **Data Models to Class Models:** Entities, Attributes and Relationships from COOL:Biz are migrated to Classes, Attributes and Associations for Select Enterprise. For every Entity-Relationship Data Model from COOL:Biz a Class Model is created in Select Enterprise, and vice versa.
- **Business Processes and Business Process Hierarchies:** Process Operations from COOL:Biz are migrated to Business Processes in Select Enterprise, and the textual descriptions are transferred. For every Process Decomposition diagram from COOL:Biz a Business Process Hierarchy diagram is created in Select Enterprise.

Datatype Mapping: For the mapping of the Datatypes which are defined in COOL:Biz to the Datatypes used in Select Enterprise (e.g. specified in C syntax), a mapping editor is provided, which allows to specify the mapping according to the standards of the user.

Interface Technology: The interface reads BML export files from COOL:Biz, and it uses the methods provided by the Select Enterprise OLE Automation Server to generate models for Select Enterprise.

Platform: The TOOLBUS Interface for the COOL:Biz and Select Enterprise requires Microsoft Windows NT/2000/XP. The interface supports COOL:Biz 4.0, 4.1, 5.0 and 5.1, Select Enterprise 6.1, 6.2 and 6.3, and Select Component Architect 4.0, 4.1, and 4.2.
