## **Data Sheet**

(effective September 2011)

The TOOLBUS: PowerDesigner PDM Importer for InfoSphere Data Architect DBM enables the import of Physical Data Models from PowerDesigner PDM into Physical Data Models (DBM) in IBM InfoSphere Data Architect (IDA) - formerly available as Rational Data Architect (RDA).

Databases, Tables, Columns, and other relational database objects are converted from PowerDesigner PDM to Physical Data Models for IDA with their properties and documentation, and the layout of the Data Models from PowerDesigner PDM is maintained in the Physical Data Model diagrams for IDA.

**Interface Technology:** The PowerDesigner PDM Importer for InfoSphere Data Architect parses the PDM files from PowerDesigner, and it uses the Eclipse Modeling Framework (EMF) to create Physical Data Models in IBM InfoSphere Data Architect (.dbm files).

**Platform:** The PowerDesigner PDM Importer for InfoSphere Data Architect supports IBM Rational Data Architect 7.5 / IBM InfoSphere Data Architect 7.5.2, and Sybase PowerDesigner 12.0 to 16.0.
