Data Sheet

(effective January 2010)

The TOOLBUS: CA Gen Importer for InfoSphere Data Architect LDM enables the import of Entity-Relationship Models from **CA Gen** (formerly available as **COOL:Gen**, **Advantage Gen**, **AIIFusion Gen**) into Logical Data Models into IBM InfoSphere Data Architect (IDA, formerly available as **Rational Data Architect**).

Entities, Entity Subtypes (Partitionings), Relationships and Attributes are imported from CA Gen into IDA with their properties and descriptions.

Subject Areas are mapped to Packages in IDA. Scoped Data Models are mapped to Data Model Diagrams in IDA, and the layout of Entity-Relationship Diagrams from CA Gen is reproduced in IDA.

Interface Technology: The CA Gen Importer for InfoSphere Data Architect uses the Read API of CA Gen to export Gen models, and it uses the Eclipse Modeling Framework (EMF) to create Logical Data Models in InfoSphere Data Architect.

Platform: The CA Gen Importer for InfoSphere Data Architect supports CA Gen 6.x and 7.x, and IBM InfoSphere Data Architect 7.5.
