Data Sheet

(effective September 2009)

The TOOLBUS: PowerDesigner PDM Exporter for Rational Data Architect DBM enables the export of Physical Data Models from IBM InfoSphere Data Architect - formerly available as Rational Data Architect (RDA) - to Physical Data Models for PowerDesigner (PDM files).

Databases, Tables, Columns, and other relational database objects are converted from RDA to PowerDesigner PDM with their properties and documentation, and the layout of the Physical Data Model diagrams from RDA is maintained in the Physical Data Models in PowerDesigner PDM

Interface Technology: The PowerDesigner PDM Exporter for Rational Data Architect uses the Eclipse Modeling Framework (EMF) to export Physical Data Models from IBM Rational Data Architect (.dbm files), and it creates PDM files for PowerDesigner.

Platform: The PowerDesigner PDM Exporter for Rational Data Architect supports IBM InfoSphere Data Architect 7.0 and 7.5, and Sybase PowerDesigner 12.0, 12.5, 15.0 and 15.1.
